District of Columbia's Leap Year Law Is Broad

Leap year is an institution established by law in the District of Columbia, one of the oldest sections of the District code being devoted to the method to be employed in determining which are leap years "in all times coming."

It is set forth in the code that "the several years of our Lord, one thousand eight hundred, one thousand nine hundred, two thousand one hundred, two thousand two hundred, two thousand three hundred, or any other hundredth years of our Lord, which shall happen in time to come, except only every fourth hundredth year of our Lord, whereof the year of our Lord two thousand shall be the first, shall not be esteemed or taken to be bissextile or leap years, but shall be taken to be common years, consisting of three hundred and sixty-five days and no more; and that the years of our Lord two thousand, two thousand four hundred, two thousand eight hundred, and every fourth hundred year of our Lord, from the said year of our Lord two thousand, inclusive, and also all other years of our Lord, which by the Julian calendar are esteemed to be bissextile or leap years, shall for the future, and in all times to come, be esteemed and taken to be bissextile or leap years, consisting of 366 days, in the same sort and manner as was used under the Julian calendar."—Washington Star.

Afghan Hound Extremely Speedy; Ancient Breed

Far back in the history of Afghanistan the natives of that country developed an extraordinary efficient hunting dog. This was before Christ and the exact date is lost in antiquity. But the breed has persisted through the ages and comes down to us known as the Afghan hound, says a writer in the Detroit News.

It is rarely seen in this country yet there are a few owners and breeders, most confined to eastern United States.

The dogs are shaggy-coated, fine muscled animals weighing about sixty pounds. They are extremely speedy and quick when running. Their courage can be judged when it is known that they were considered the best breed of dogs to run and attack jackals and leopards. They stand about twenty-seven inches high at the fore shoulders and are not unlike a collie in appearance but with a more fine body.

Afghan hounds are shy and are not given to making friends quickly but once they become attached to their master they become the personification of faithfulness and loyalty.

Properties of Dyes

The layman usually thinks of dyes as substances that have color. This concept is not quite correct, says Thomas M. Beck in the Chicago Tribune. It is essential that a dye have two other properties; it must attach itself to the fabric to which it is applied, and it must stay there to a reasonable degree in spite of washing and exposure to weather. It just happens that heretofore the only property that we desired to attach to fabrics was that of color.

There is a certain coal tar dye long known to the textile industry as martius yellow. It had been observed that moths steered clear of woolen goods dyed with this particular dye. Unfortunately, no other worth-while dyes could be found which possessed this property.

Sequim State Park Being Improved

The W. P. A. has granted the State Parks Committee funds for the improvement of Sequim Bay Park in Clallam County, Washington. The funds are to be expended in the building of roads, bridges and construction of buildings and recreation grounds in connection with a tourist camp. Twenty seven various items are mentioned in the project proposal which will produce a completed park. It is estimated that the services of 51 persons will be required for ten months for completion of the work. Fifty-three men were requested to report at the park on December 2. Others will be added to the forces as rapidly as is practicable. Federal funds of $50,845.50 will pay the entire cost of the project.

Work Payrolls Advanced to Dec. 10

With the deadline advanced to December 10 when all persons now receiving direct relief must be transferred to work relief payrolls, Geo. E. Gannon, W. P. A. head of the State of Washington, announced the unemployment picture is being changed as rapidly as humanly possible and that the success of the Administration's plan to place people to work appears assured.

Approval of several state-wide projects, including state fisheries, surplus commodity distribution, mineral surveys and others, have been received by the state officers of the WPA and as soon as breakdowns of the projects by districts and counties have been completed, they will be placed in operation, providing employment for hundreds of persons now depending on relief.

Bert Lyons, who has been acting aa temporary editor of the Journal announces that he has resigned.

Aztec Images Like Egyptian

When Cortez and his band of Spanish conquerors came to Mexico early in the Sixteenth century they met with stout resistance from the Aztecs, highly civilized Indians. As the Spaniards despoiled the Aztec temples, pressing the natives into slavery, they discovered many carvings of images and friezes, indicating the existence of a well-organized religion. From a study of the idols and the decorations on the walls of the temples archeologists have noted Babylonian similarities. The Aztec religion was one of many gods, being in that respect like the pagan belief of ancient Greece and Rome.

London Bridge Situated at Head of Navigation

London bridge is the first or farthest down of the bridges across the Thames at London. It is situated at the head of navigation, about a half mile above the Tower of London.

But the present London bridge is not the one celebrated in the nursery song, nor in the proverb to the effect that "London bridge was made for wise men to pass over and fools to pass under." That famous old bridge, which stood for more than 600 years, was finally demolished more than a century ago.

The site has probably been the location of a bridge from very early times in London's history, notes a writer in the Cleveland Plain Dealer. But the earliest bridge in this location is not mentioned until the Eleventh century. It was a wooden structure which was destroyed by a storm and high tide November 16, 1091.

The first stone bridge, the famous bridge spoken of above, was built between 1176 and 1209 on a wooden foundation. It consisted of 20 arches. The roadway was 926 feet long, 60 feet above the water and 40 feet wide. Houses were built upon the bridge, and in the course of time it became a continuous street with three openings on each side of the river.

The buildings on the bridge were repeatedly devastated by fire, most notably in the great fire of 1666. The eleventh span from the Southwark end formed a drawbridge flanked by a tower built in 1426, and on top of which were stuck the heads of persons executed for treason. All the superstructures were removed in 1757. In 1832 the old bridge itself was torn down, the new London bridge having been opened the year before.

Llamas Stubborn Beasts, as Queer as They Look

Llamas are as odd as they look. They are temperamental and, some people insist, even stupid. They are faithful and yet stubborn when used as beasts of burden. And they are among the oldest beasts of burden on this continent, notes a writer in the St. Louis Globe-Democrat.

When the Spanish conquered Peru they found llamas in great numbers being used as domestic animals by the Incas. Even today they are very commonly used to carry loads of over a hundred pounds in the Cordilleras, where they seem not to mind the cold and where they nibble their meager living from the scant mountain herbage.

Perhaps it is his own good judgment which urges a llama to balk at climbing a glacier path and to refuse a rough and difficult trail. But the llama is sure-footed and strong and his masters suspect that he could safely take as difficult a trail as any other creature, for he is at home on mountain sides. Until 1850 llamas were the only animals employed by men as means of transportation in this South American region.

Every part of the animal has some value. The females are kept for their milk. The meat is similar to mutton and is a common food. The skin is made into leather and the coarse hair is used by the Peruvian Indians for weaving into fabrics.

Baron von Steuben

Frederick William Augustus Henry Ferdinand, Baron von Steuben, was a Prussian officer on the staff of Frederick the Great, who came to America late in 1777 and offered his services to the Continental congress as a volunteer officer. General Washington at once appreciated the worth of such a trained soldier and made him inspector general at Valley Forge. In spite of the hardships under which the army lived that winter Von Steuben changed them from a mob into well drilled troops. As a reward congress gave him the rank of major general and inspector general of the entire army. Upon retirement he was given a grant of land at what is now Steubenville, N. Y., where he lived until his death in 1794.

Sun Hatches 'Gators' Eggs

Alligator nests are built of mud, moss and grass, and are placed near the edge of the water. From two to five dozen eggs are laid in each nest, as a rule. The sun's heat provides warmth for the hatching, but the female stays near the nest in order to protect it from attack. Alligator eggs are a little larger than those laid by hens.

Cleopatra's Needle

Cleopatra's needle, the most ancient monument in London, was cut out of solid stone 1,500 years before Cleopatra was born. The obelisk is 68 feet in height and weighs 180 tons. The huge stone was found lying overturned in Alexandria in the Nineteenth century. It was hewn from the quarries of Assuan, far up the River Nile.

Townsend Youth Club Organized

Over 200 people met Monday evening in the Eagle's Hall and organized the younger group into a second Townsehd Club. The following were chosen as temporary officers until the charter arrives: Melvin Anderson, president; Eugene Hervan, vice-president Mrs. Elizabeth Hervan, secretary; Miss Mergenthaler, treasurer.

The meeting was followed by a social hour in the lower hall where refreshments were served to 160 persons. C. L. Vaughan, district organizer, assisted with the organization. An excellent program presented during the evening included a vocal number by Helen Peterson, accompanied by Clinton Thompson; a dance number by Theresa and Dorine Goslin from Mrs. Myra Kaneski's dance class and a brief address by the Rev. L. L. Farmann. The regular meeting of Club No. 1, will be held next Monday evening at 7:45.

Irrigation Project Will Employ 40 Men

A project for the benefit of the Lindsay Irrigation District, located about ten miles east of Port Angejes, will be undertaken by the W. P. A. The work will be clearing underbrush and vegetation from the sides of the main canal of the system, cleaning out mud slides and otherwise repairing the main canal by widening and sloping the sides.

It will require 40 men for about seven months from the relief rolls to do this work. Federal funds alloted, $5,052.00; sponsors' contribution, for material and superintendence, $1,850.00, making the total cost of the project $4;702.00.

NOTICE

The Townsend Clubs of Port Angeles are not supporting any candidate for any local office. Instructions from headquarters forbid it.

C. L. VAUGHAN,
President

No Tribute to Great Britain

Canada does not pay a tax to the British government. Since the British North American Act, proclaimed July 1, 1867, the Canadian government, like those of the other dominions, has become more self-reliant and independent, until now it has scarcely any other legal link with the United Kingdom than the fact that each acknowledges the same king.

American Hawks as Hunters

According to the falconers the American hawks provide birds which are as suitable for hunting as any to be found in Europe. They are divided into two classes. Those in the first class are the true falcons. high-flying, long-winged birds which are considered the aristocrats among birds of prey. They include the prairie falcon, the pigeon hawk or merlin and the American duck or noble peregrine falcon. The latter nests in the highlands of the Hudson, where it builds its nest on the face of almost inaccessible cliffs.

League Postpones the Oil Embargo

NOVEMBER 29 had been set as the date for a meeting of the League of Nations sanctions committee to consider the imposition of an oil embargo against Italy, but Premier Laval and British Ambassador George Russell Clerk, after a conference in Paris, recommended that the session be indefinitely postponed, and this action was taken. The statesmen feared early oil sanctions would seriously aggravate the political situation, and Laval thought if he were given more time he might bring about the conciliation of the Italo-Ethiopian quarrel.

Premier Laval

There were good reasons for the uneasiness of the French and British governments. Benito Mussolini had bluntly told the world that the imposition of an oil embargo would mean war in Europe, the warning being given through his ambassador to France, Vittorio Cerruti. Furthermore, there was doubt in London and Paris concerning the ability of the United States government to prevent the shipment of oil to Italian ports. In Washington it was reported that Ambassador Augusto Rosso had discussed the matter with Secretary of State Hull, suggesting that attempts to choke off exports of oil, copper, cotton and other commercial articles did not constitute "orthodox" neutrality.

Emperor Haile Selassie made two airplane flights to the fighting fronts in Ethiopia and cheered up his forces so that their resistance to the invasion was measurably stiffened, especially in the South. The government at Addis Ababa announced that its armies had driven the Italian troops back from Gorahai, recapturing the town of Gabredarre. In the North the advance of the Italians beyond Makale was very slight because of attacks on the supply columns and patrols, and Italian casualties were increasing, though the Ethiopian losses probably were much larger. The invaders are finding out what they were told from the beginning, that most of the occupied territory is untenable militarily.

American Delegation for Naval Conference

ELEVEN American diplomats and naval officers, selected by Secretary of State Hull, have sailed to represent this country in the coming naval conference in London. At their head is Norman H. Davis, the President's ambassador-at-large for Europe, who participated in the preliminary conversations last year. Acting with him will be Undersecretary of State William Phillips and Admiral William H. Standley, chief of naval operations. Advisers to the delegation will be Ray Atherton, counselor of the American embassy in London, and E. H. Dooman of the State department, who knows all about Japanese and other Far Eastern affairs.

N. H. Davis

Noel H. Field of the division of western European affairs, who attended the last naval conversations, and Samuel Reber, secretary of the American legation in Bern, Switzerland, will act as technical assistants.

The navy's four technical experts will be Capt. Royal E. Ingersol, Commander Roscoe E. Schuirmann, Lieut. Arthur D. Ayrault, and Lieut. J. R. Fulton.

David M. Key, assistant chief of the division of current information, will act as press officer for the delegation in its contacts with foreign newspaper men, and R. Allen Haden will serve as the delegation's secretary.

When the conversations in London have gone far enough to indicate what the several nations may be expected to do, President Roosevelt will direct the course to be followed by Mr. Davis and his colleagues. It is taken for granted they will strive to bring about an agreement for the limiting of future naval construction.

Federal Reserve Bulletin Notes Business Recovery

GOVERNORS of the federal reserve banks, in the bulletin of the reserve board, have sounded a most cheerful note concerning business conditions. Summing up facts gathered all over the country, they concluded that the United States was undergoing the most substantial economic recovery since the depression began, with every sign pointing to its continuance.

Business activity has been sustained for ten months near the high level it reached the first of the year, the bulletin said, "in contrast to the course of business in the three preceding years when advances were not sustained but were quickly followed by declines."

Here are some of the elements the bulletin says are contributing to this most desirable state of affairs:

Industrial activity during the first ten months of this year has been at a higher level than in any of the four preceding years, with the chief acceleration in industries producing durable goods.

Residential building has shown a "marked and sustained" increase for the first time since the decline, which in this industry began in 1928.

The greater industrial activity has been accompanied by increased incomes to both industrial workers and farmers, and greater distribution of commodities to consumers.

Continued ease in the money market and accumulation of a vast amount of idle money have been reflected in a revival of the capital market, resulting in security flotations in larger volume than at any time since 1930.

Profits of large corporations have increased, accompanied by a "sustained" advance in security prices, representing primarily the effect of cash buying by investors.

China Clipper Carries Air Mail to Orient

PAN-AMERICAN Airways opened a new chapter in the story of aviation when its huge China Clipper carried the first consignment of air mail from Alameda, Calif., to Manila, with stops at Honolulu, Midway islands, Wake island, and Guam. Capt. Edwin C. Musick, veteran chief pilot of the company, was in command of the craft and was aided by a crew of six men. Fourteen passengers started on the flight and twelve were dropped off to relieve the staffs at Midway and Wake. The 1,700 miles between Guam and Manila had not been flown heretofore.

Capt. Edwin C. Musick

After one or two more flights to Manila the clipper will continue to China and operate on through schedules thereafter.

The Philippine Clipper, second of Pan-American Airways' trans-Pacific air fleet, arrived at Alameda from the Atlantic coast and her crew began preparations for a flight to Manila beginning December 6. The plane flew 500 miles from San Diego in three hours 50 minutes. Previously she had flown from Miami, Fla., to Acapulco, Mexico, 1,590 miles, and Acapulco to San Diego, 1,600 miles.

Communists Stir Revolt in Northern Brazil

BRAZIL was experiencing another revolt, in the northern part of the country. Latest advices said the rebels had control of the city of Natal and that a hot fight was on for possession of Pernambuco. The uprising was laid to the Communists and was believed to be led by Luis Carlos Prestes, Communist leader for all of South America. It was said he planned to spread the movement all over Brazil, Argentina, Paraguay and Chile.

Under command of Gen. Manuel Rabelo, the federal troops, army and navy airplanes and two cruisers were hurriedly sent northward to combat the rebellion.

Split in the American Federation of Labor

FOR a long time it has been apparent that there would be a split in the American Federation of Labor over the issue of industrial unionism versus Craft unionism. That split now has occurred, and in the ranks of organized labor there is coming a great battle between the two elements. The matter was precipitated by the resignation of John L. Lewis, head of the United Mine Workers of America, as vice president of the federation. He is the chief protagonist for unit unionization of mass production of industries, and his opponents, the craft union advocates, are led by William Green, president of the organization. The latter have had a majority in the late conventions of the federation, but Lewis has a lot of followers and is a determined fighter. He has set up separate headquarters in Washington and seven international union leaders joined him immediately.

John L. Lewis

WASHINGTON NEWS ITEMS OF INTEREST

Brief Resume of Happenings of the Week Collected for Our Readers

Olympia — Twenty-eight per cent. of the liquor purchases in state liquor stores and agencies the past 10 months have been of domestic sweet wines.

Yakima — Yakima Indians have sold 363 head of beef cattle for $14,938 in a two-day auction. The stock brought from $3.40 per hundred for fat cows to $7 for choice calves.

Olympia — Automobile accidents took 53 lives in the state during October. Fourteen deaths occurred in Tacoma, eight in Seattle and two each in Spokane and Yakima.

Toppenish — Sugar beet owners of the Toppenish district will receive $4.25 a ton as the first payment on the 1933 crop. The amount is 15 cents a ton less than the first payment last year.

Grand Coulee — Over 100,000 tourists, representing nearly every part of the globe, visited the Grand Coulee dam this year, according to Ralph Kugelman, contact man for the Columbia Basin commission.

Seattle — If it isn't one thing, it's another with Phil S. Lesher, veteran Seattle printer. For the past 11 days he has been hiccoughing steadily. He had to be fed through his veins. The hiccoughs are gone, but Lesher can't swallow. Doctors said his neck muscles are paralyzed and it will be some time before he will be able to swallow correctly. He is still being fed through his veins.

Peach — Far up in the wild reaches of the Columbia river, at the village of Lincoln, Mrs. Imogene Balcom owns and operates her own ferry boat. Hundreds of sheep, 150 at a time, were taken across the stream this fall, outdistancing the snows. The boat has no motor but runs on a cable. Captain Balcom literally has both hands full during a trip, operating two wheels to keep the craft moving.

Walla Walla—The Walla Walla Chamber of Commerce predicted on the basis of a recent survey that hundreds of carloads of fruits and vegetables would roll from the Inland Empire to Canadian markets as a result of the recently signed reciprocal trade agreement. The Walla Walla valley in particular will be in a position to regain a major share of the export business to Canada which it lost following the tariff act of 1930, the chamber announced.

Spokane — Approximately 100,000 bushels of wheat were purchased here Saturday by the Federal Surplus Commodities Relief corporation, V. E. Pugh, state administrator, announced recently. The wheat was the first obtained here since the corporation entered the market early last week. The corporation advanced its price a cent above the market Saturday in order to speed up the purchase program, which calls for a total quota of 250,000 bushels of Washington-grown wheat to be obtained for relief purposes.

Aberdeen — The annual income from cranberries in the Grayland-North Cove district will range between $150,000 and $200,000 per year within four years, growers predict. One hundred thirty-eight acres this year yielded 30,000 boxes and would have brought in $90,000 if the bogs had not been frozen. In four years there will be between 230 and 240 acres in production. Since the freeze growers have been harvesting the "burned" berries, which, if used immediately, are good for canning. Twelve tons have been sold for canned sauce and a good market is opening up.

Tree 57 Feet Around

Aberdeen — A cedar tree logged on Charlie creek, three-quarters of a mile from the city limits, measured 57 feet around the trunk. The trunk looked solid but was hollow.

104-Pound Squash

Kennewick — In response to publicity given a grower in the upper Yakima valley for raising a squash weighing 64 pounds, Bernard Kempe of the Kennewick valley proceeded to show the world. He brought in one from his ranch which weighs 104 pounds.

Pasco Lettuce Popular

Pasco — That Pasco-grown lettuce topped the Chicago market was reported here by Senator C. Stinson of the Western Grain & Seed company on his return from that city. He took two carloads of the locally grown vegetable with him. The sale price was $4 per crate; $1.15 was freight expense, leaving $2.85 net to the grower. The price was higher than that paid on the same day for Idaho, California, New Mexico and Florida lettuce.

what Irvin S. Cobb thinks about:

Wales' Fancy Pants.

SANTA MONICA, CALIF.—All is excitement in London. The prince of Wales has adopted a new style in trouserings called the "straight outline."

With no desire to be morbid, I've gone into the fascinating details. I glean from the cablegrams that they touch the wearer in but one place, and only then if his royal highness is sitting down. When walking, he has to take two steps while the trousers are taking one. It's as though Slim Summerville swiped my things and was trying to escape with the goods on. I shall not follow the royal example. As a snappy dresser I never seem to get anywhere, somehow. George Ade once said no matter what I put on I still looked like Paducah, Ky., and when I read what the well-dressed man will wear I sorrowfully admit there's nothing correct about me except my back collar button and I'm not so sure about that. It's one of those plain bone ones—nothing flashy.

Irvin S. Cobb.

So I shall continue to stick to the garments enclosing me at the moment. They are, as you might say, my pre-depression pants. In youth they sheltered me; I'll not desert them now. Besides, I might be arrested.

* * *

Hollywood Hermits.

IF YOU'VE been to Movieland, you've seen our fur-bearing hermits. As true recluses, these gentlemen have the innate desire to avoid being conspicuous, which is ever characteristic of Hollywood. So they march the principal streets all day, with their long hair and their ditto whiskers waving in the climate, and wearing as few clothes as the law allows—and out here we allow few indeed.

There is a single member of the group who's different. He's just as woolly as the others, but he doesn't parade up and down. Nor will he tell you his name or the address of his cave, or where he came from or where he's going. Some think he has a secret past. But I think he has a great ambition.

It's my idea he wants to go down in history as the one who was not commissioned a colonel on the staff of the governor of Kentucky.

* * *

Opportunities of Youth.

IN THE brave days before '28 the future of an ambitious young graduate was assured. He sold bonds. Statistics show there was a salesman for every bond. Shortly thereafter, any fellow who owned a bond was his own salesman.

I still have some very beautiful ones which I'd like to swap for a pair of moss-agate cuff buttons, a ukulele, a collection of postage stamps or what have you?

Then followed the dreary years when the youth with a diploma had nowhere to head in — desperate, hopeless years. But now—now he needn't worry any more about a career. It's all fixed. He can step out of college right into a CCC camp.

* * *

The Return of Prosperity.

GOOD times are certainly coming back—at least to the fur business. I hear prices are so high that only the wealthier minks can afford their own skins; the rest of them will go through the winter wearing dyed rabbit.

I went to a party and nearly every woman there was up to her ears in ermine or chinchilla or silver fox or some other very exclusive peltry. There was one large lady who had on at least three kinds of expensive wild animals. If somebody had left the door open, her wrap would have stolen right back to the zoo.

It's fine prosperity is returning. Wouldn't it be grand if, instead of being visited on a favored few, it could be passed around?

* * *

Crooning to Oysters.

THE professional crooner has found his musical soul-mate. It's our famous Pacific coast bi-valve, that winsome creature which is about the size of a suspender button.

A Seattle judge experimented on the harmonic affinities of shell fish. He couldn't get anywhere with the clam, clams being proverbially dumb, but, working on our cunning little native oyster, he first established its natural vibration, then found a note to correspond. Do that, and an oyster opens right up.

"They open easiest," says the discoverer, "when crooners are performing."

Now let's establish what form of animal life responds spiritually to a columnist.

Who Are You?

The Romance of Your Name

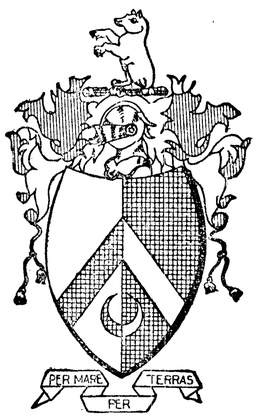
By RUBY HASKINS ELLIS

An Alexander?

THE surname Alexander is derived from two Greek words meaning "to aid or help, a powerful auxiliary."

The Alexander family, according to antiquaries, was originally a branch of the MacDonalds, for Alexander MacDonald, younger son of the Lord of the Isles, obtained a grant of lands in the county of Clackamanan where he made his residence and his descendants took the name of Alexander as a surname.

In the reign of James V, Andrew Alexander married Catherine Graham. His son Alexander married Elizabeth, the daughter of Sir Robert Douglas. After two generations we find William Alexander tutor to the earl of Argyle, who appeared



Alexander

at the court of James I of England, and by him was knighted in 1614. It was he who personally conducted the colonization of Nova Scotia in America, for which service the king made him a grant of the province. In 1625 he was made governor-in-chief of Nova Scotia.

Scottish Alexanders of the same line came to America and settled on large tracts of land on the Potomac river. The city of Alexandria near Washington takes its name from this distinguished family.

A great general of the Revolutionary war was William Alexander, whose patriotic services in the war and especially in the Battle of Long Island, 1776, are records of remarkable bravery. He was also known as Lord Stirling, have inherited this title from Scottish forbears, dating back for many generations.

The Virginia Alexanders in this country began with John, who came from Scotland in 1659 and settled in Stafford county. He married Tabitha Smart. The Colonial and Revolutionary roster records many by the name of Alexander who were loyal to their country in time of war.

Robert Alexander (1720-83) was a founder of the first classical school west of the Blue Ridge, later named Washington and Lee university.

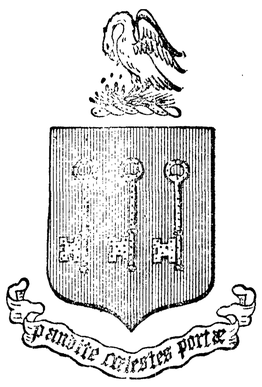
Alexanders in the New England states were represented by George, who settled in Windsor, Conn., and Robert, a native of Scotland, who was living in Boston in 1684.

* * *

A Gibson?

THE name Gibson means "the son of Gib" or "the son of Gilbert."

Several families of this name followed James II, of Scotland, in the settlement of Ireland in 1603, and during his long reign others settled on the lands in the Province



Gibson

of Ulster in the north of Ireland. So it is that most Americans of this name are of Scotch-Irish extraction.

Among the first Gibsons to found the family in this country was John, who came to New England in 1631 and settled at Cambridge, Mass. In 1637 he became a free man.

Another settler was Richard Gibson, a clergyman of Portsmouth, N. H., in 1637.

William Gibson was a resident of Lynn, Mass., in 1665.

More Humble About Our Opinions in New Kinship

At the moment, many people are deploring "a lack of leadership" in religion, says Lloyd C. Douglas in Cosmopolitan. "In my opinion, the confessed bewilderment of the churches is a sign of health and progress. The recent use of the soft pedal has made the prophet of more value to the people. They sense an intellectual kinship with the honest man who admits he is a bit at a loss to know exactly where we are.

"Editors who were used to saying the last word necessary for the adequate instruction of their constituents are writing in phrases tempered by a new shyness. Statesmen, teachers, parents, even half-grown children are no longer laying down their beliefs with a bang. We are all becoming humble about our opinions. This is the type of kinship we have needed more seriously than any other. It is somewhere along this road that we may find our peace."

Everybody Signs

Our idea of a gentle, easy job is circulating a petition.

GAS, GAS ALL THE TIME, CAN'T EAT OR SLEEP

"The gas on my stomach was so bad I could not eat or sleep. Even my heart hurt. A friend suggested Adlerika. The first dose I took brought me relief. Now I eat as I wish, sleep fine and never felt better."—Mrs. Jas. Filler.

Adlerika acts an BOTH upper and lower bowels while ordinary laxatives act on the lower bowel only. Adlerika gives your system a thorough cleansing, bringing out old, poisonous matter that you would not believe was in your system and that has been causing gas pains, sour stomach, nervousness and headaches for months.

Dr. H. L. Shoub, New York, reports: "In addition to intestinal cleansing, Adlerika greatly reduces bacteria and colon bacilli."

Give your stomach and bowels a REAL cleansing with Adlerika and see how good you feel. Just one spoonful relieves GAS and chronic constipation. Sold by all druggists and drug departments.

A Small Part

Taking one's ease ought not to last but the portion of a day.

Naturally

Selassie Not of Hebraic Descent, Godbey Asserts

Emperor Haile Selassie of Ethiopia is neither of Hebrew nor direct royal descent, Dr. Allen Howard Godbey, archeologist and orientalist, declares. Doctor Godbey is a former professor of Duke university.

"There is no discoverable Hebraic blood in the kingdom of the 'Lion of Judah,'" he says. "The alleged marriage of the queen of Sheba and King Solomon entered the Ethiopian tradition centuries ago after an alliance of the two kingdoms. A trace of Judaism, however, is found in Ethiopia as the result of Egyptian contacts."

I'M SOLD

It always works

Just do what hospitals do, and the doctors insist on. Use a good *liquid* laxative, and aid Nature to restore clocklike regularity without strain or ill effect.

A liquid can always be taken in gradually reduced doses. *Reduced dosage is the real secret of relief from constipation.*

Ask a doctor about this. Ask your druggist how very popular Dr. Caldwell's Syrup Pepsin has become. It gives the right kind of help, and right amount of help. Taking a little less each time, gives the bowels a chance to act of their own accord, until they are moving regularly and thoroughly without any help at all.

Dr. Caldwell's Syrup Pepsin contains senna and cascara—both *natural* laxatives that form no habit. The action is gentle, but sure. It will relieve any sluggishness or bilious condition due to constipation without upset.

For the Meek Shall—

Pray for a little egotism; and don't be meek, whatever you are.

Still Coughing?

No matter how many medicines you have tried for your cough, chest cold or bronchial irritation, you can get relief now with Creomulsion. Serious trouble may be brewing and you cannot afford to take a chance with anything less than Creomulsion, which goes right to the seat of the trouble to aid nature to soothe and heal the inflamed membranes as the germ-laden phlegm is loosened and expelled.

Even if other remedies have failed, don't be discouraged, your druggist is authorized to guarantee Creomulsion and to refund your money if you are not satisfied with results from the very first bottle. Get Creomulsion right now. (Adv.)

PILES

Let Us Send You A $1 Package on FREE TRIAL

Just send us your address and you will get by return mail on approval (in plain wrapper) this $1 package of Dr. Van Vleck's great three-fold Absorption Treatment which is helping thousands who suffer the pain and soreness of itching, bleeding, protruding Piles. No knife, no pain, no doctor's bills. If satisfied with benefits received, then send us $1. If not, keep your money. We trust you for fair treatment. Write today.

Quick, Complete Pleasant ELIMINATION

Let's be frank. There's only one way for your body to rid itself of the waste matters that cause acidity, gas, headaches, bloated feelings and a dozen other discomforts—your intestines must function.

To make them move quickly, pleasantly, completely, without griping. Thousands of physicians recommend Milnesia Wafers. (Dentists recommend Milnesia wafers as an efficient remedy for mouth acidity).

These mint flavored candy-like wafers are pure milk of magnesia. Each wafer is approximately equal to a full adult dose of liquid milk of magnesia. Chewed thoroughly in accordance with the directions on the bottle or tin, then swallowed, they correct acidity, bad breath, flatulence, at their source and at the same time enable *quick, complete, pleasant elimination.*

Milnesia Wafers come in bottles of 20 and 48 wafers, at 35c and 60c respectively, or in convenient tins containing 12 at 20c. Each wafer is approximately an adult dose of milk of magnesia. All good drug stores carry them. Start using these delicious, effective wafers today.

Professional samples sent free to registered physicians or dentists if request is made on professional letter head.

* * *

Things the box score never told me:

Yale is fairly well satisfied at losing only the game and the goal posts to Dartmouth. Once, when Harvard had achieved an unexpected triumph, it cost the Elis $10,000 to remove crimson paint from their buildings. . . . Wally Fromhart, Notre Dame quarterback, was a guard in a West VIrginia State prison camp last summer. . . . Al Simmons once was a pin boy in a Milwaukee bowling alley. . . . Phil Reuter and A. A. Baroni, now well-known trainers of thoroughbreds, once were waiters. . . . Gorilla Jones, former middleweight champion, has a lion cub as a household pet.

Charlie Cook, manager of Ford Smith, used to be a taxi jockey and a bartender. . . . Paul Berlenbach, the former light-heavyweight champion, is a bouncer in a Yorkville dance hall. . . . Charles (Eagle Eye) Creighton, dean of soccer referees, is superintendent of one of New York's finest skyscrapers.

What once very strict institution, which had a long slump in football, now is reported as making it very easy for ambitious pigskin-bearing patriots? . . . Even if he beats the rap it is unlikely that the Jockey club will renew the license of Willie Saunders, the jockey who got into a jam at Louisville.

Joe Drohan, Colgate's sophomore end, is light-heavyweight boxing champion of the university. He also won jobs on the frosh football, baseball and basketball teams. . . . Jim Craig, Army halfback who jumped from the third team to a starting berth this season, will bear watching. Among other things he wears the same No. 12 on his jersey that was worn by Ray Stecker and Jack Buckler, two of West Point's greatest backs. . . . Colonel Abe Hallow is not among those possessed of the freedom of the Pimlico clubhouse because, several years ago, he raised a "We wuz robbed" squawk after winning a bet. The horse, you see, paid only $84 in the machines and the eminent Abe wanted more.

GOLDEN PHANTOMS

Fascinating Tales of Lost Mines

by Editha L. Watson

©W.N.U

PILLARS OF GOLD

WHEN the Spanish conquerors were following the northward windings of the Rio Grande, they went as far as the northern part of what is now New Mexico. Here, Spanish legend relates, some of the padres, with soldiers at their command, turned to the westward. In the midst of some extremely rough mountains they came across a small valley, and here they saw two great pillars made of large stones.

What these pillars were they did not know, but with the curiosity to which we owe so much of our information about the early Southwest, the padres halted to examine these monuments. To their surprise and delight, they found that some of the stones were pieces of rich gold ore, which argued that their source must be somewhere in the vicinity.

So it proved; the lode was rich beyond all dreams, and the party immediately set to work, the soldiers laying down their arms to become miners. They remained in the hidden valley long enough to take out all the gold they could carry with them.

After this time, others who passed that way hunting wealth saw the lonely pillars in the center of the valley, but for a long time no one thought to examine them.

At last an old miner by the name of Mike O'Leary, rambling about through this region on a prospecting trip, found the ancient workings, and appeared in Parrot City some time later with enough ore to finance an expensive spree for several weeks. After sobering up he disappeared, only to come into Animas City several months later with more ore.

The old prospector of the western mountains was a wily creature. He preferred hunting alone or with one partner, and if he did strike gold he could be "as mum as a clam" about its location, even though he loved to boast about his good fortune. Knowing the hills as he did the streets of his home town, he usually eluded all those who tried to follow him. He knew only too well that the discovery of his mine would mean a lot of unpleasant neighbors.

O'Leary was just such a man. He might show up every now and then with enough gold to pay for a celebration, but he always drifted out of sight before anyone could see where he went. Finally he disappeared for good—nothing more was seen of him, and it is supposed that either he went to some distant city to spend his money, or else the mountains claimed him for the final sacrifice.

With O'Leary's passing, however, the secret of his mine did not remain a secret. Once in a while some miner comes to the front with ore which he claims came from that little valley in the mountains, and there are even said to be maps, made by others who came into sight of the two rock pillars. However, as far as anyone knows, the location of the mine has never been filed as a claim.

* * * * * * *

SECRET OF THE PRAIRIE

COUNCIL of war!

A party of freighters camped under an old lightning-killed cottonwood, talking earnestly. The year was 1856; the place was Kearney county, Kansas, on the Santa Fe trail. There was $70,000 in Spanish gold in that wagon train, being carried from Mexico to Fort Leavenworth. Would it ever reach its destination?

Indians had begun to follow the wagons in New Mexico. They hung on, making no move to attack, but drawing a little closer day by day. Now, as the freighters consulted with each other around the camp fire, the Indians lurked out yonder in the darkness, waiting—waiting—

It was decided to bury the gold. Here, where the great dead tree formed a landmark on the trail, was as good a place as any, and there was no time to lose.

It was midnight. The full moon shone brightly on the camp and on the cottonwood, and cast a shadow along the ground. Here, where the shadow fell, they buried the Spanish gold.

Next day they moved on. The Indians followed as usual, drawing a little closer. Three days later they attacked, when the train had reached Pawnee Rock. Only one man survived; he reached Fort Leavenworth, told his story, and died.

There was no chance, just then, to send out after the gold. It was safe; it must wait until the opportunity presented. And so a year passed before a party set out on the Santa Fe trail to recover the hidden coin.

But during that year lightning had struck the old cottonwood again, and this time had destroyed it completely. There was nothing left to show where it stood. Only the tall buffalo grass rippled in the wind—grass which had grown closely over all the countryside.

Make Free and Easy Wrap-Around With a Smart Shirtwaist Air

PATTERN 2396

A work-a-day frock which combines all the best style features of your more expensive frocks, plus some of its own, is the frock most apt to "earn its salt," and your admiration. As popular with the slim figure as it is with the bit-more-plump one, this wrap-around is easy to make, and oh-so-simple and easy to slip into in the morning. The smart collar gives it a tailored look, as do the slashed sleeves, although the collar may be omitted if you're a fancier of the free 'n' easy neckline. It's practically frock and "undies" in one, for no slip is necessary with the generous shadow-proof over-lap.

Pattern 2396 is available in sizes 14, 16, 18, 20, 32, 34, 36, 38, 40, 42 and 44. Size 16 takes 3¾ yards 36 inch fabric. Illustrated step-by-step sewing instructions included.

SEND FIFTEEN CENTS (15c) in coins or stamps (coins preferred) for this pattern. Write plainly name, address and style number. BE SURE TO STATE SIZE.

Address orders to the Sewing Circle Pattern Dept., 243 West Seventeenth St., New York City.

No Stopping This Sheriff When He's After His Man

Means his trousers, W. H. Westphal arrived in Brownsville, Texas, the other day by train from Chicago in charge of a sheriff's deputy to face a charge of disposing of mortgaged property. The officer, Will Cabler, said Westphal's wife took her husband's trousers, believing Cabler would be "too embarrassed" to travel with a trouserless prisoner, but "that is where she was wrong."

"I wasn't embarrassed a bit—because I sat on the seat behind him," Cabler explained. "The passengers snickered a bit, but it didn't bother me. I felt sorry for Westphal in St. Louis, because we had to walk about four blocks to change trains. It was almost freezing and the wind was blowing strong."

Dogs for War Blind

German soldiers who were blinded during the World war have each been given a Schaeferhunde, a strain of German police dogs that are famous the world over, to lead them about. Each dog is marked with a large red cross and people make way for him and his charge in the streets.

A Horrible Example

The Customer—Isn't it rather unusual to see a barber with long hair and whiskers like yours?"

The Barber—Yes; but it's good business. Every man that sees how awful they look on me will fall for a haircut and shave."

Back to American Names; We Have Individuality

A German historian, who has come to this country to take notes on the cities, towns and villages named after Hanover, Germany, says that there are no less than 77 of these in the United States. And there are, also, according to the same authority, 66 Hamburgs, 22 Bremens and 22 Brunswicks in this country.

The number of places in the United States named after places in Great Britain and on the continent of Europe is legion; for it was natural for the early settlers in the New world to wish to perpetuate here the memories of the communities in the Old world from which they had come.

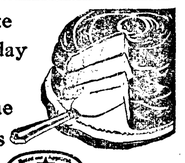
While this was altogether proper, as long as America was composed of European colonies, we are not sure that its continuation today would be helpful. We have a feeling that the recent tendency to go back to native American place names is more useful in developing a consciousness in Americans that the United States is something more than an offshoot of Europe; that it is evolving, as generation follows generation, a distinctive individuality.—Detroit Free Press.

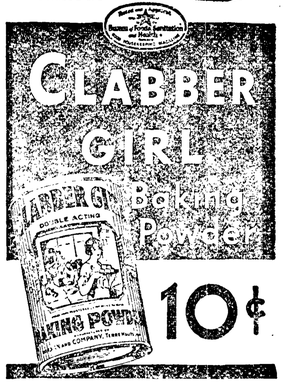
Land for Every One on Friendly Isles in Pacific

Tonga, in the Pacific, has announced that there is land for everyone in its islands. Queen Saloti and her husband, who is prime minister, have seen that every youth in the Friendly Islands on reachings sixteen is given a quarter of an acre of land in his village and eight acres in the bush. He must build a hut and grow coconuts. Education is free and compulsory in Tonga, and 99 per cent of Tongans can read and write.

Be sure of Success

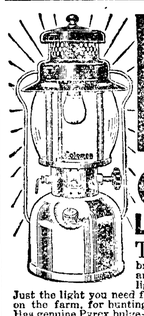
And bake that Holiday Cake with the famous





Little Things Count

It is largely the little things which make a masterpiece of art; it is the little things which make men and women truly fine.



GOOD LIGHT Every Night WITH A **Coleman LANTERN**

THIS is the little Coleman Lantern with the big brilliance. It lights instantly and is always ready for any lighting job, in any weather.

Just the light you need for every outdoor use . . . on the farm, for hunting, fishing, outdoor sports. Has genuine Pyrex bulge-type globe, porcelain ventilator top, nickle-plated fount, built-in pump. Like Coleman Lamps, it makes and burns its own gas from regular gasoline. It's a big value, with years of dependable lighting service, for only **$5.95.**

Editorial Comment

After an absence of several weeks we are glad to greet our friends of the Journal again as the editor. We will have an important announcement in our next issue. C .L. V.

The ferry strike continues to be a matter of great concern to the public. Don't be fooled by the flood of false propaganda put out throngh the press. The strike should be settled. but it should be settled on a basis of fairness to all, and not by armed force. Tear gas and bayonets never settle anything.

Straw ballots on political prospects are starting early. The Literary Digest, chief tester of public opinion, is now receiving returns on its ten million ballot test. The early returns indicates the New Deal is slipping. This emphasizes the ease with which the U. S. shifts its political faith.

Formation of Pearls

A pearl is formed by a secretion that becomes pearly nacre, the identical substance forming the inner lining of the shell, around some foreign substance which has found its way into the shell but has not been aborted. The intruder, be it a grain of sand or a piece of shell, causes irritation and, as a means of self-protection, a film of secretion is laid upon it. In the case of round pearls, a "pearl sac" usually grows around the intruder and the inner surface of the sac hardens and becomes a layer of pearl. As succeeding layers form the pearl increases in size and value.

Lee's Invasion of Pennsylvania

The Dictionary of American Biography states that General Lee's invasion of Pennsylvania, which resulted in the Battle of Gettysburg, July 1, 2 and 3, 1863, was undertaken for three reasons: (1) to supply his army; (2) to strengthen peace sentiment in the North by showing the futility of the effort to force the South into submission; (3) in hopes that he could compel Lincoln to detach troops from the far South and thereby relieve the pressure on Vicksburg. This hard-fought battle is often regarded by historians as the turning point of the Civil war.

Pure Rubber

Pure rubber is a sticky, plastic material that is useless for most of the purposes for which it is needed. It is a compound of carbon and hydrogen and has the property of being chemically unsaturated—that is, capable of combining with a number of chemical reagents. To make it elastic and heat-stable it is combined with sulphur. It is only within recent years that successful attempts have been made to combine it with other things. The gas chlorine, for example, combines with it quite readily to give a resinous material that is useful as a base for varnishes. With hydrochloric acid product is formed that can be molded into elastic, transparent sheets. The latest development in this line is that of oxygenated rubber. The combination of rubber and oxygen is a soft, plastic mass that can be readily molded but which on heating sets into a tough, hard solid.

Adam of the Anthropologists

With the elimination of the Java man from the human family, the honor of being the Adam of the anthropologists—in respect to remains thus far discovered—goes to a grotesque creature living in Germany more than 1,000,000 years ago—the so-called Heidelberg man. This creature is known only from a single bone—a lower jaw. The only other claimant for the honor is the Eoanthropus, or dawn man, of England, whose remains are such a mixture of human and chimpanzeelike charters that anthropologists never have agreed as to whether they could possibly have existed in the same animal.

Morse's Telegraph

In 1832, Samuel F. B. Morse, an American artist, conceived the idea which later he developed into the electric telegraph and his telegraphic alphabet or code. Morse completed his first instruments in 1835 and during the succeeding eight years gave a number of public demonstrations. After several fruitless efforts, he obtained, in 1843, a government appropriation to build an experimental telegraph line. Over this line, from Washington to Baltimore, the first telegraph message was transmitted on May 24, 1844. It was "What hath God wrought?" With the sending of this message began a new era in human history, for it marked the first successful transmission of written word by electricity — a branch of communication which during the past 90 years has played an important part in the social and economic development of America and of the world as a whole.

Nature Printing

A scholar fingering old books on the table of a second-hand book shop frequently comes on a volume of poetry or a Victorian novel with a flower or leaf pressed among the pages. Sometimes the form of the dried plant has been transferred in a brown stain to one page, says the New York Sun. To a bontanist such a stain would be likely to recall certain volumes of "nature printing" issued in the Eighteenth century, in which accurate records of leaves and whole plants were made by a kind of transfer process no longer practiced.

Prominent Landmark in Cairo

One of the landmarks of Cairo, Egypt, is the Mohammed Ali mosque which surmounts the citadel. The citadel was built in 1176, chiefly of stones taken from the smaller pyramids of Gizeh. The mosque was started in 1824 by Mohammed Ali, great grandfather of King Fuad of Egypt, and completed about 20 years later. Its slender minarets and graceful design form one of the most beautiful works of Arabian art extant.

Wild Iceland Horses

The United States is not the only country which can boast of wild horses. There are many of them on the island of Iceland. Formerly they were shipped to England for use in the mines, but that market is closed since mining machinery was adopted, so they now run wild and continue to multiply.—Washington Post.

Completing the Suez Canal

Men dreamed of severing the connecting isthmus between Africa and Asia long centuries ago, but until the middle Nineteenth century the project remained a dream. Then, in 1854, a Frenchman, DeLesseps, obtained a concession from the Khedive of Egypt, and began the actual digging, financing the work by public sale of stock. In 1869, having encountered numerous obstacles and spent more than twice the estimated sum, the engineers completed the Suez canal.

COMPLETELY
MODERNIZED
AT A COST OF $500,000.00
hotel
GOWMAN
ALL rooms now with bath . . tub, shower, or both. The homelike atmosphere . . the *Personality* . . for which it's famous; plus delightful newness! Rates from: Single, $2.; Double, $3.
