

## Watt Detector Appliance Worksheet

Use this worksheet to record your monthly estimated cost for each appliance. Be sure the Watt Detector is set on the "cost per month" setting.

Electric rates are subject to change.\*
As such, we recommend visiting the PUD web site to confirm current rates.
PUD rate information can be found here: http://www.clallampud.net/electric/electric\_rates\_info.asp

To use the Watt Detector, only program the kWh rate, not the daily basic charge.

\*As of August 1, 2011, the current PUD residential electric rate for most of the county is a basic charge of \$0.62 per day plus \$0.065 per kilowatt hour (kWh) of energy used. Therefore, you would program the \$0.065 rate to determine the cost of using your appliances.

To download or print additional worksheets, or for more information, visit www.clallampud.net or www.nols.org.

If you are a customer of another utility, such as the City of Port Angeles (http://www.cityofpa.us/utilities.htm), please consult their web site for current rate information.
